Abstract (en)

[origin: WO2008133537A1] A pharmaceutical composition exhibiting improved stability comprising ACE inhibitor or pharmaceutically acceptable salt thereof as the active ingredient, alkali copolymer of butyl methacrylate and pharmaceutically acceptable excipients. A method for manufacturing of the pharmaceutical composition exhibiting improved stability comprising ACE inhibitor, or pharmaceutically acceptable salt thereof, as the active ingredient, consists in the mixing of the active ingredient, alkali copolymer of butyl methacrylate and pharmaceutically acceptable excipients in appropriate weight ratio, and, subsequently, tableting of the mixture using direct tableting method.
