Abstract (en)

[origin: WO2008151122A1] A card vault for attachment to an automatic card shuffling machine, card shoe, card verifying machine and card discard rack is disclosed. The card vault facilitates a system of reducing human handling of cards thereby reducing human error and cheating. Cards may be transferred in a card vault directly from the card verifying machine to an automatic card shuffling machine. After being dealt during one or more table games, the cards are placed in a discard rack and transferred to the card vault for transport to a card verifying machine where the deck is verified. The card vault and contained cards are tracked in substantially real-time using wireless technology such as a RFID transmitter and receiver.
