Abstract (en)
[origin: WO2008141379A1] A cushion made of resilient polymer is a push fit onto the edge or corner of a sheet of glass or other sheet material susceptible to chipping. The cushion is of modified U-section having a shock absorbing bed and upstanding legs which define a sheet receiving slot. The legs diverge when the sheet is inserted and exert a gripping force sufficient to retain the cushion when the sheet is carried.
