Abstract (en)
[origin: US2008245687A1] A package for housing a disc is provided, including a cover forming an elongated spine panel with first and second opposing panels extending therefrom such that the opposing panels selectively rotate between open and closed positions and a tray attached to one of the opposing panels. The tray has a planar surface and first and second opposing angular surfaces extending from the planar surface. Each angular surface has a slot for receiving an edge of the disc to support the disc above the planar surface, wherein at least one of the angular surfaces can be deflected to facilitate removal and insertion of the disc.
