Abstract (en)
[origin: WO2008145235A1] The invention relates to a control device for lubrication systems, having a control processor (3) which is arranged in a housing (2), having connections (4), which are formed on the housing (2), for sensor inputs (I) and control outputs (Q), which are connected to the control processor (3), and having an operator interface (5) which is secured to the outside of the housing (2) and is intended to input control parameters. Provision is made for the control processor (3) to be set up with different control programs for different lubrication systems and for program switches (6) for selecting the different control programs to be arranged inside the housing (2).
