Abstract (en)
[origin: WO2008128540A1] This invention describes a device suitable for placement between an information storage disc such as a CD or DVD and a cover (24). The device comprises a flange (21), which may be biased such that the flange (21) urges the disc away from the cover (24) in order to prevent damage to the information stored on the disc due to twisting or scratching occurring if the disc is release by the attachment dot alone.
