Abstract (en)

[origin: WO2008132593A2] The invention relates to an electrical supply distribution system comprising: at least one longitudinal extending panel having a plurality of embedded electrical conductors, and at least one socket part for releasable attachment to said at least one panel and having a socket for connecting to an external plug and a connecting part with connectors for establishing connection between said plurality of electrical conductors and said socket when attached to the panel and a back leg part, wherein the panel along at least a part of its longitudinal extent has an opening for insertion of the back leg part of said at least one socket part at any longitudinal position of the opening, for establishment of a connection between the plurality of said electrical conductors of said panel and said connecting part arranged on the back leg part of said at least one socket part.
