Abstract (en)

[origin: EP2151178A1] The device (1) has a plate (2) equipped with a monoblock tenon and a through hole for its fixation on a frame (L). A slide (3) has axes (38) for receiving a support element e.g. crossbeam. A locking/unlocking unit has a locking pin (40) held by the plate. The pin occupies an active position for locking the slide in position with respect to the plate, when the pin is inserted in one of superimposed slits (32) of the slide. The pin occupies an inactive position for authorizing vertical movement of the slide with respect to the plate, when the pin is inserted in a lateral recess (33).
