Abstract (en)

Method of transferring a person or a load between a vessel and an offshore structure, comprising the step of establishing a connection by at least one line between the vessel and the offshore structure, which line is stretched, and subsequently a transport member is guided along the stretched line to move between the vessel and the offshore structure. The line can for example be stretched by driving the vessel to move away from the offshore structure, e.g. astern, e.g., in part load.
