Abstract (en)  
[origin: EP2151516A1] The present invention aims to improve the handiness of a liquid-absorbent sheet used to absorb liquid leaching out from foodstuff such as fish or meat. The liquid-absorbent sheet 1 used for absorbing liquid leaching out from foodstuff such as fish or meat is formed of a non-woven fabric containing core-in-sheath type conjugate fibers 2 in at least 60% by weight. The conjugate fibers 2 having the sheath components fused together. Assumed that the thickness of the non-woven fabric is divided equally into 10 layers consisting of 1st to 10th layers, respective densities of the 1st layer and the 10th layer are adjusted to be higher than an average value obtained from respective densities of the 5th layer and the 6th layer.
