Abstract (en)

[origin: EP2151536A2] The lock with several automatic closure points comprises a first kinematic device for closing the lock and retention by means of spring latch following the alignment of the movable part with the fixed part of the door/window frame, a second kinematic device for selecting the operating mode for closing the lock, a third kinematic device for opening the lock by means of handle and/or key, separately or selectively activatable, and a fourth kinematic device for preventing the opening of the lock by means of the handle.
