Abstract (en)

A light emitting diode (LED) lighting set includes an aluminum extrusion radiating base (10), an LED module (20), a light focus plate (30), a diaphanous cover (40) and two electrical connectors (50). The LED module has a substrate (21) settled onto the radiating base and a plurality of LED lamps (22) electrically connected onto the substrate (21). The light focus plate (30) is fixed onto the radiating base (10) and correspondingly formed under the LED lamps (22). The diaphanous cover (40) connects the radiating base (10) and correspondingly formed under the light focus plate (30). The electrical connectors (50) separately connect two ends of the radiating base (10) and also electrically connect the substrate (21). The aluminum extrusion radiating base (10), the diaphanous cover (40) and the two electrical connectors (50) define a closed space together, and the LED module (20) and the light focus plate (30) are received in the closed space; therefore, the LED lighting set has good heat dissipating performance and the usage life-span is greatly improved.
