Abstract (en)

[origin: WO2009000986A1] The invention relates to a device (D) dedicated to the control of the values of at least one parameter acquired by a sensor (CA) during a predetermined acquisition period TA. The device (D) includes control means (MC) for comparing each acquired value to a threshold value in order to consider it as respectively plausible or non-plausible if it is respectively lower or higher than a selected threshold value, and for delivering on an output either a reliable acquired value anterior to the compared acquired value if the latter is plausible, or a replacement value if the compared acquired value is not plausible.
