Abstract (en)

[origin: WO2008138690A1] The invention relates to a device having a rotating or revolving surface during operation, particularly a roller or cladding of a machine for producing a fibrous material web, particularly a paper web, having a plurality of elements (5) of a measuring device, particularly sensors, disposed in or below the surface (6), the elements (5) being disposed offset from one another in the running direction of the surface (6) and/or transversely thereto in order to improve the capturing of material properties, and to a machine having such a device, and a method using such a machine.
