Abstract (en)
[origin: DE202007007320U1] The appliance has a thermally insulated door with an outer wall (1) and an inner wall, where the walls are connected with each other along longitudinal edges. A locking unit (2) is connected with transverse edge of the walls, and has an opening for receiving a hinge joint pivot. A socket is fastened at an inner side of the locking unit, where an internal hollow space of the socket is arranged behind the opening. The opening is an input of a door bearing bush, which engages in the space, and pre-forms at the locking unit.
