Abstract (en)
[origin: WO2008135214A1] The invention relates to a switching device having a vacuum interrupter chamber, in which at least one movable contact piece is arranged according to the preamble of claim 1. In order to considerably increase the switching performance and the dielectric strength, it is proposed according to the invention that two contact arrangements connected in series within a vacuum interrupter chamber are arranged with a total of two disclosed contact surfaces.
