Abstract (en)

[origin: WO2008142490A1] A connector assembly comprising: - a first connector comprising a first locking feature (22); - a second connector comprising a second locking feature (31) cooperating with the first locking feature (22); a mating detection device (1) adapted to take a first electrical state when the first and second connectors are in a locked state; the mating detection device is mechanically prevented from taking the first state until the first and second locking features (22, 31) lock said first and second connectors together.
