Abstract (en)  
[origin: EP2153902A2] The electrostatic separator (1') comprises a flow channel (3) with a channel wall (4) and a channel interior (5), through which a particle-containing exhaust gas flows in a flow direction. An electrode (6) is provided, which extends in the channel interior, particularly in the flow direction. A heatable particle discharge unit (9) is provided, which prevents the deposit of the particles of the exhaust gas at the electrode. An independent claim is included for a heating system for producing energy by combustion of an energy source, such as biomass.
