Abstract (en)

[origin: US2009324365A1] A system for automatically producing a bound album consisting of individual sheets, for example, a photo album is disclosed. The system includes a unit which immediately draws in sheets output by a printer or a stacker; a unit for creasing said sheets so as to facilitate folding them and keeping said sheets in their folded form; an adhesive application unit designed to paste at least some of the sheets two by two; and a unit to flip part of the cover sheet. The sheets are received and compiled on a delivery board equipped with registration features for this purpose. The board is capable of translational movement in a direction substantially parallel to the direction in which the sheets are transported inside the system and movement between several positions in synchronism with the adhesive application unit.
