Abstract (en)

[origin: CA2689996A1] The invention relates to solutions that are suitable for perfusing and preserving human or animal organs, parts of organs, tissues, or parts of tissues. Said solutions contain at least one active substance selected from among the group comprising the NO-independent stimulators and activators of soluble guanylate cyclase. The invention further relates to methods for producing the solutions according to the invention as well as the use of said solutions in different medical processes, especially in the field of transplantation medicine.
