Abstract (en)
[origin: WO2008153459A1] Pressure equalizing device (10) comprising a fluid container (16) for attachment to a receptacle (12) such as a vial to permit pressure equalization between the fluid container (16) and the receptacle (12). The pressure equalizing device (10) comprises a flow channel (18) that is arranged to provide fluid communication into or out of the fluid container (16) when the pressure equalizing device (10) is attached to the receptacle (12). The pressure equalizing device (10) also comprises a fluid inlet (20) that contains a one-way valve (28) that permits fluid to flow into the fluid container (16) via said fluid inlet (20) and that prevents fluid from flowing out of the fluid container (16) via said fluid inlet (20) and filter-receiving means (30) that are arranged to permit fluid flowing into or out of the fluid container (10) to be filtered when the filter-receiving means (30) comprises a filter (34).
