Abstract (en)

[origin: DE102007026874B3] A swiveling arm (21) fastens on the side of a platform and swivels out over the edge of the platform. A suspension device (22) for an unmanned small submarine vessel (17) is held on the swiveling arm, which links on one side to the suspension device and on the other side to a fastening device (25) so as to swivel. The fastening device is designed to be supported on one side on a bulge (11) on the edge of a rubber/inflatable dinghy (10) and designed on the other side for fastening on a rubber/inflatable dinghy's boarded floor-insert.
