Abstract (en)
[origin: WO2008138151A1] The invention relates to a double-carrier platform (1, 2) for a watercraft in order to reduce the force influences when driving a tender vehicle (49), to improve the safety of lift control and, by means of the lift kinematics, to enlarge the usable area of the carrier platform (1) with the lower platform (2). Various electronic means such as touch sensors (11), position transducers/angle transmitters (20) or motor control (69) additionally enhance the safety of the installation.
