Abstract (en)
[origin: WO2008130256A1] A movement assembly including a drive axle (21); a number of threaded drive portions (22) operatively associated with the axle; two or more work articles (12) positioned in a row aligned with the longitudinal axis of the drive axle; at least one work article having a complimentary thread (18) engaged with an associated drive portion; characterised in that the movement assembly is configured such that rotation of the drive axle causes the threaded drive portions to turn and alter the spacing between the engaged work articles along the row.
