Abstract (en)

[origin: WO2008140408A1] The invention relates to a device for damping of noise from a motor vehicle with an engine arranged in an engine space and at least one cooling air duct arranged close thereto. The invention is implemented by the cooling air duct being demarcated from the engine space, the cooling air duct being at least partly provided on its inside with a sound-damping material, and by the cooling air duct being provided with at least one angled section. The invention also relates to a vehicle which comprises a device for damping of noise as above.
