Abstract (en)
[origin: WO2008135427A1] A rail for a suspension system has an interior space, designed to fit the head of a screw (26), a back wall (20) delimiting the interior space in which a passage (19) for a shaft of the screw (26) is formed, and a front side, onto which carrier arms (10) with different heights can be hung in engagement with snap-in recesses (16) of the rail. The rail has an outer profile (7), comprising at least the back wall (20), and a strip (15) provided with the snap-in recesses (16). The strip (15) is provided with a hook (29), and can be moved on the outer profile (7) from a mounting position in which the head of the screw (26) is accessible from the front side, to an operational position in which the weight of the strip (15) hangs at least partially on the hook (29).
