Abstract (en)

[origin: EP2000864A1] The device (14) has a winding stem (50) arranged to occupy a time indication correction position, and a sliding pinion rotatably coupled to the stem. A correction motion transfer (58) is kinematically connected to the pinion when the stem occupies the position. A correction wheel assembly (68) is mounted on a lever (70), engaged with date indicator and actuated by the transfer. The transfer has a ring (60) with internal and external circumferences, where the external circumference of the ring is provided with inner teeth (62) indirectly meshed with the assembly.
