Abstract (en)
[origin: WO2008129132A1] The present invention concerns a method for time monitoring. The method comprises receiving a selection of an activity from a first portion (104) of an application window (100); receiving a selection of a target from a second portion (106) of the application window; providing a calendar view in a third portion (108) of the application window; establishing a calendar entry (110) by receiving a selection from the calendar view for a time period; automatically linking the selected activity and the selected target to the calendar entry; and displaying information about the selected activity and target in the calendar entry (110).
