Abstract (en)

[origin: WO2008141596A1] The invention relates to a method for representing image objects in a virtual three-dimensional image space. The method involves detecting the position of a viewer of the image object with respect to a representation that is as close to reality as possible of an image object in a virtual image space, particularly regarding interaction with the image object, characterized in that the position of the viewer is included in a calculation and/or selection of views of the image object such that the real position of the viewer and/or the change thereof in the virtual image space is displayed and used to control at least one virtual camera, wherein through a virtual camera, a view of the image object represented to the viewer is received.
