Abstract (en)

[origin: CA2684704A1] The invention relates to device for receiving and issuing value documents , comprising a verification unit for verifying the authenticity of supplied value documents, an infeed transport unit for transporting value documents a long a transport path past the verification unit or through the latter, said unit having a first and a second part which lie opposite one another during operation and between which the transport path is formed, a storage unit containing at least two stores for storing at least two different types of value document in such a way that one value document of each type can be selectively issued from the storage unit, irrespective of the order in which the value documents were introduced into said storage unit, and a value document transport system for transporting verified value documents to the storage unit or from the latter to a value document issuing unit. At least the first part of the infeed transport unit is pivotally held on the device so that it can pivot about a first pivoting axis between an operating position, in which value documents can be transported, and an open position, in which the transport path is accessible.
