Abstract (en)  
[origin: WO2008151855A1] The invention relates to a motor vehicle power cable comprising at least one first flat conductor element (10) surrounded by at least one first insulation element (14a). The motor vehicle power cable, in addition, comprises at least one second flat conductor element (12) surrounded by at least one second insulation element (14b) and at least one shielding element (16) surrounding at least the first insulation element (14a) and at least the second insulation element (14b). Furthermore, the first flat conductor element (10), surrounded by the first insulation element (14a), and the second flat conductor element (12), surrounded by the second insulation element (14b), are arranged such that broad surfaces of the flat conductor elements (10, 12) lie upon each other.
