Abstract (en)
[origin: WO2008151937A1] The invention relates to a switching pole (1) for a high-voltage network, having a switching unit (5) disposed in the switching pole housing (2) thereof, the switching unit comprising a fixed and movable contact, wherein an input connector (4) on the fixed contact side is connected to an output connector (10) on the movable contact side in an electrically conductive manner in the switched-on position of the switching unit (5). In order to be able to simultaneously connect a current (12) and a voltage sensor (16, 16') to one of the connectors while maintaining breakdown safety, the invention provides an arrangement of the current (12) and voltage sensors (16, 16') at a circumferential distance from each other on the circumferential wall (3) of the switching pole housing (2), which prevents partial discharges.
