Abstract (en)

[origin: WO2008155744A2] In one exemplary embodiment, an apparatus (50) includes: means for determining (52) a source timing parameter for a source node (70) and a relay timing parameter for a relay node (60), wherein the relay node (60) is disposed between the source node (70) and the apparatus (50); first means for transmitting (56) the relay timing parameter to the relay node (60); and second means for transmitting (56) the source timing parameter and the relay timing parameter to the source node (70). In another exemplary embodiment, an apparatus (70) includes: first means for receiving (76) a first timing parameter; second means for receiving (76) a second timing parameter; first means for transmitting (76) a message to a first node (60) in accordance with the first timing parameter; and second means for transmitting (76) the message to a second node (50) in accordance with the first and second timing parameters.
