Abstract (en)

[origin: WO2008143943A1] Method and apparatus of providing data processing for use in medical communication system. Sampling a predetermined number of vivo analyte sensors for determining a sensitivity value for each of the sampled predetermined number of analyte sensors. Performing data processing on the received signal stream for one or more predetermined conditions associated with the signal stream during the predetermined time period and outputting a notification to the individual, wherein the each of the one or more predetermined conditions are associated with an adverse data condition associated with the analyte sensor.
