Abstract (en)
[origin: EP2157021A1] The machine (1) has a drive, a conveying device (2) i.e. carousel-type machine, for a container (2a) and a labeling device (3). A pulling device (4) pulls the labeling device from the conveying device during a disconnection of the drive or occurrence of an asynchronism of the labeling device relative to the conveying device. A pulling operation takes place using an adjusting drive of the labeling device. The adjusting drive is coupled with the drive such that the labeling device is moved away from the conveying device in a radial direction during the disconnection of the drive.
