Abstract (en)

A food package (10) is provided having two different food products (12,14) disposed within a common flexible film wrapper (20). A portion of the flexible film wrapper (20) adjacent a first of the food products (12) is adapted to at least partially shield microwave radiation from the first food product to a greater degree than the second food product (14) when both are heated together in the film wrapper in a microwave oven.
