Abstract (en)
[origin: EP2157219A1] The present invention provides a knitted fabric including a warp pattern section where a knitting yarn is bridged across in a substantially wale direction between base knitted fabric sections spaced apart from each other knitted using a flat knitting machine, and a knitting method of the same. The knitted fabric knitted using the flat knitting machine includes a base knitted fabric section 4A, another base knitted fabric section 4B, a warp pattern section 3 where a knitting yarn is bridged across in a substantially wale direction so as to be turned back from the base knitted fabric section 4A to another base knitted fabric section 4B to connect the base knitted fabric sections 4A, 4B, and a bind-off processing section 41 formed at the last course of the base knitted fabric section. The knitted fabric is obtained by the knitting method of the knitted fabric including the steps of knitting a base knitted fabric section 4A; knitting another base knitted fabric section 4B; and forming a warp pattern section 3 where a knitting yarn is bridged across in a substantially wale direction between the knitted fabric sections 4A, 4B after a knitting of the knitted fabric is finished at between the steps of knitting the base knitted fabric sections.
