Abstract (en)

[origin: EP2157258A2] The plate has a cement-containing material layer (7), and a foil layer (4) arranged between a ground line (3) and an insulation layer (6). A sliding medium (5) e.g. PTFE and soft soap, is arranged over the foil layer and provided for horizontal movable mounting of the material layer supported by the insulation layer. A humidity layer is attached on the foil layer, and the sliding medium is applied over the humidity layer. The insulation layer exhibits the sliding medium on a side turned towards the foil layer. The foil layer consists of polyethylene foil or PTFE foil. An independent claim is also included for a method for manufacturing a material plate.
