Abstract (en)

[origin: EP2157264A1] The window (1) comprises a sash (3) carrying a window pane (4) being mounted movably in a frame (2). A locking device (7) comprises at least one displaceable locking element in the form of an espagnolette bolt (8a, 8b) and a handle (13) adapted to displace the locking element between a locked position and an unlocked position. An engagement portion of the espagnolette bolt is split up into a first and a second end bolt (17, 18), so that, in a closed position, the first end bolt (17) may engage a first recess (15) of a corner striking plate (10), and the second end bolt (18) may engage a second recess (16) of the corner striking plate, and so that, in a ventilation position, the second end bolt may engage the first recess (15) of the corner striking plate.
