Abstract (en)

[origin: EP2157269A2] The holder system has a frame including a U-shaped region for receiving multiple wall elements (5), where the U-shaped region is formed by a profiled part (1) and an M-shaped clamping profile (7). The M-shaped clamping profile is attached to a lower side of the frame and is removed after end of mounting process of the wall element. The clamping profile protrudes into a drainage channel and is covered by a window sill (6). An L-shaped intermediate piece (2) is inserted between the profiled part and the clamping profile. An independent claim is also included for a method for mounting wall elements.
