Abstract (en)

[origin: EP2157275A2] The invention relates to a screen device (1) comprising: - a fixed screen or a roll-up and roll-down screen (2); - side guides (3) containing screen guides (4) for the securement or guidance of the screen (2); - and at least one spring (5), comprising a fastening portion (6a, 6b, 6c), for at least partially enclosing the screen guide (4), and at least two fastening elements (6b, 6c), which are arranged on this fastening portion (6a, 6b, 6c) such that they are displaced relative to each other and on opposite sides in the longitudinal direction of the screen guide (4), the said fastening elements having an interspace which is at least as large as the width of the screen guide (4), so that the spring (5) can be fastened with a rotary motion to the screen guide (4), and comprising at least one resilient lip (7), which, with the aid of a fastening element (6b, 6c), is provided on the fastening portion (6a, 6b, 6c), which resilient lip (7) extends between the screen guide (4) and the side guide (3) in order to stretch the screen (2) in a laterally resilient manner.
