Abstract (en)  
A vehicle control apparatus 3 according to an embodiment of the present invention is incorporated in a vehicle equipped with an engine 1 that is configured such that a lubricating oil and a working oil are circulated inside the engine 1 by an oil pump 9 driven by a crankshaft 1a. An oil pressure monitoring function performed by the vehicle control apparatus 3 maintains a notification operation for an oil pressure anomaly, even when the engine 1 is automatically shut down by an idle-stop function during execution of the notification operation.
