Abstract (en)
[origin: WO2008149324A1] The invention relates to a reverse-osmosis purification system that comprises at least one liquid supply (1) for supplying a liquid to be processed simultaneously into two chambers (A1B) of a separation member (3), said chambers being separated by a semi-pervious membrane, the liquid being fed into one chamber at a pressure higher than that of the liquid in the other chamber, said separation member (3) providing at the outlet a concentrated liquid (5) and a diluted liquid (6).
