Abstract (en)
[origin: WO2009147288A1] The invention relates to a ship comprising a cargo space on the bottom (3) of which there is a bottom plate (4), whereby above the level formed by the bottom plate there are a plurality of container supports (5) for receiving and securing containers and cargo transportation stands to the cargo space, the upper end of the container supports being at a distance equal to the height of the container supports from the bottom plate. In order that the ship could be employed for transporting bulk goods, in addition to containers and various goods transportation stands, on top of the bottom plate (4) of the cargo space there is arranged a levelling construction (7) on top of which there is arranged a protective plate (9) provided with lead-through points (12) for container supports such that the container supports are surrounded by the levelling plate (7) and the protective plate (9) and the upper level of the protective plate is at a level with the upper end of the container supports (5).
