Abstract (en)
[origin: DE102007028218B3] The hinge (1) has two hinge parts, which cooperate with one another and are rotated about a common hinge axis, in which a lateral hinge part has a plate-shaped section. The lateral hinge part with a retaining piece is applicable into a groove at the face of the door or the window, cooperates firmly, and is detachably connected. The plate-like section is aligned in an imaginary plane parallel and perpendicular to the hinge axis. The plate-shaped section is adjusted in an imaginary plane perpendicular to the plane of the plate-shaped section against the retaining piece.
