Abstract (en)
[origin: WO2008155227A1] The invention relates to a computer system for aircraft maintenance including a network partitioned into a secured so-called avionics area (101) and an open area (102). The system includes a first software module stored in the avionics area and a second software module stored in the open area, the first module being adapted for browsing a diagnosis tree, the second module being adapted for presenting a maintenance electronic documentation the browsing of the diagnosis tree by the first module automatically and synchronously triggering a presentation by the second module of pages of said maintenance documentation respectively associated with these nodes.
