Abstract (en)

[origin: EP2159339A2] The extension has an extension collar, and lamellae (6) arranged parallel to each other and rotatable around an appropriate rotation axis. A drivable coupling bar (8) is designed as an adjusting device and operatively connected with lamellae by a hinge connection. The lamellae lie on the extension collar in a closing position of the lamellae. A rotation axis of an edge-lateral lamella (12) is arranged outside the extension collar and is operatively connected with the lamellae (6) by a connecting rod that is arranged parallel to the coupling bar.
