Abstract (en)
[origin: EP2159365A2] The locking arrangement has a connecting device with a connecting element (20) extending continuously through the total length between an actuating device and a locking device. The connecting element bends, particularly elastically bends perpendicular to its longitudinal axis and parallel to the deflection line. The door leaf swivels relative to a swiveling axis running in a closing position of the gate leaf. Independent claims are included for the following: (1) a sectional door with a guide rail arrangement; and (2) a method for manufacturing a sectional door.
