Abstract (en)

[origin: EP2159501A2] The device (1) has a ventilation device (3) supplying particle-free, laminar or turbulence air stream into a closed working chamber (2). A returning air channel (4) is connected with the chamber over an outlet opening (7). Air from the chamber is discharged over the air channel. A spray gun (5) is arranged in the chamber to clean the chamber and the air channel. Blocking devices (10, 11) block connection sections (8, 9) between the chamber and the air channel. The blocking devices are opened for cleaning the air channel. The blocking devices have a metal membrane for cleaning the channel.
