Abstract (en)  
[origin: EP2159523A1] The present invention relates to a refrigeration equipment comprising a first and a second side wall (12, 13) defining between them an inner space (10) for receiving items to be refrigerated, the side walls (12, 13) being arranged opposite to each other and having a plurality of side grooves (14a, 14b); and a console system (20) arranged to couple a storage unit (24) to the side grooves (14a, 14b) in the inner space (10), the console system (20) comprising a first and a second side section (21, 22) substantially parallel with each other and designed for sliding engagement with the storage unit (24). According to the invention, each side section (21, 22) comprises a first portion (211, 221) and a second portion (212, 222), wherein the first portion (211) of the first side section (21) is arranged in a first side groove (14a) in the first side wall (12) and the first portion (221) of the second side section (22) is arranged in a first side groove (14a) in the second side wall (13), and wherein the second portion (212) of the first side section (21) is arranged in a second side groove (14b) in the first side wall (12) and the second portion (222) of the second side section (22) is arranged in a second side groove (14b) in the second side wall (13).
